Architecture and Key Components

Cloud Management with Juniper Mist Wired Assurance Driven by Mist Al

You can quickly and easily onboard EX4000 switches (Day 0), provision them (Day 1), and manage (Day 2+) them from the cloud with Juniper Mist Wired Assurance, which brings Al-Native automation and insights that optimize experiences for end users and connected devices. The EX4000 provides rich Junos® operating system telemetry data for Mist Al, which helps achieve simpler operations, shorter mean time to repair (MTTR), and streamlined troubleshooting.

In addition to Juniper Mist Wired Assurance, Juniper's groundbreaking <u>Marvis Virtual Network Assistant</u>, simplifies network operations and streamlines troubleshooting via automatic fixes for <u>Juniper Networks EX Series Switches</u> or recommended actions for external systems.

Features and Benefits

Simplified operations with Juniper Mist Wired Assurance

- Day 0 operations—Onboard switches seamlessly by claiming a
 greenfield switch or adopting a brownfield switch with a single
 activation code for true plug-and-play simplicity.
- Day 1 operations—Implement a template-based configuration model for bulk rollouts of traditional and campus fabric deployments, while retaining the flexibility and control required to apply custom site- or switch-specific attributes. Automate provisioning of ports via dynamic port profiles.
- Day 2 operations—Leverage the Al in Juniper Mist Wired
 Assurance to meet service-level expectations, including
 throughput, successful connects, and switch health, with key
 pre-and post-connection metrics (see Figure 1).

Virtual Chassis Technology

Juniper's Virtual Chassis technology allows multiple interconnected switches to operate as a single, logical unit, enabling users to manage all platforms as one virtual device. You can interconnect ip to six EX4000 switches as a Virtual Chassis using 2 x 10GbE SFP+ dedicated front-panel ports. Although configured as Virtual Chassis ports by default, you can also configure the 2 x 10GbE SFP+ ports as network ports. The EX4000 switches can form a Virtual Chassis with any other models within the EX4000 product line.

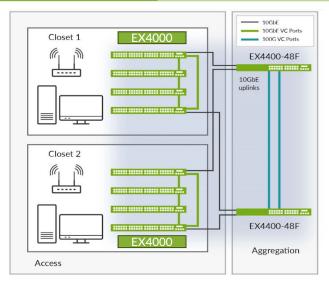

Figure 3: EX4000 Virtual Chassis config interconnected via dedicated front-panel 10GbE ports

Chassis-Class Availability

The EX4000 switches deliver high availability (HA) through graceful Routing Engine switchover (GRES), and nonstop bridging and routing when deployed in a Virtual Chassis configuration.

In a Virtual Chassis configuration, each EX4000 switch is capable of functioning as a Routing Engine (RE). When you connect two or more EX4000 switches, all Virtual Chassis member switches share a single control panel. Junos OS automatically initiates an election process to assign a primary (active) and backup (hot-standby) RE. An integrated L2 and L3 GRES feature maintains uninterrupted access to applications, services, and IP communications in the unlikely event of a primary RE failure.

When more than two switches are interconnected in a Virtual Chassis configuration, the remaining switch elements act as line cards and are available to assume the backup RE position should the designated primary RE fail. You can assign primary, backup, and line card priority status can to dictate the order of ascension; this N +1 RE redundancy, coupled with the GRES, nonstop active routing (NSR), and nonstop bridging (NSB) capabilities of Junos OS, assures a smooth transfer of control plane functions following unexpected failures.

The EX4000 implements the same slot/module/port numbering schema as other Juniper chassis-based products when numbering Virtual Chassis ports, providing true chassis-like operations. By using a consistent operating system and a single configuration file, all switches in a Virtual Chassis configuration are treated as a single device, greatly simplifying overall system maintenance and management.

Individually, the EX4000 offers a number of HA features typically associated with modular chassis-based switches. When combined

with the field-proven Junos OS and L2/L3 failover capabilities, these features provide the EX4000 with true carrier-class reliability.

- Nonstop bridging and nonstop active routing: NSB and NSR on the EX4000 ensure that control plane protocols, states, and tables are synchronized between primary and standby REs to prevent protocol flaps or convergence issues following an RE failover.
- Redundant trunk group (RTG): To avoid the complexities of STP without sacrificing network resiliency, the EX4000 employs redundant trunk groups to provide the necessary port redundancy and simplify switch configuration.
- Cross-member link aggregation: Cross-member link aggregation allows redundant link aggregation connections between devices in a single Virtual Chassis configuration, providing an additional level of reliability and availability.
- IPv4 and IPv6 routing support: IPv4 and IPv6 Layer 3 routing (OSPF and BGP) is available with a Flex license, enabling highly resilient network.

PoE/PoE+ Power, Perpetual and Fast PoE

The EX4000 delivers PoE to support connected devices, includingphones, surveillance cameras, <u>IoT</u> devices, and 802.11AX/Wi-Fi 6/Wi-Fi 7 access points. It offers a PoE power budget of up to 960W on the EX4000-48MP model, with up to 60W per port based on the IEEE 802.3bt PoE standard.

EX4000 switches support perpetual PoE, which provides uninterrupted power to connected PoE powered devices (PDs) even when the power sourcing equipment switch (PSE) is rebooting. EX4000 switches also support a Fast PoE capability that delivers PoE power to connected endpoints during a switch power-up, even before the switch is fully operational. This is especially beneficial in situations where the endpoint only needs the power and is not necessarily dependent on network connectivity.

Junos Telemetry Interface

The EX4000 supports Junos telemetry interface (JTI), a modern telemetry streaming feature designed for switch health and performance monitoring. You can stream sensor data to a management system at configurable periodic intervals, enabling network administrators to monitor individual link and node utilization as well as troubleshoot issues such as network congestion in real time. JTI delivers the following features:

 Performance management by provisioning sensors to collect and stream data and analyze application and workload flow paths through the network.

- Capacity planning and optimization by proactively detecting hotspots and monitoring latency and microbursts.
- Troubleshooting and root cause analysis via high-frequency monitoring and correlation of overlay and underlay networks.

Junos Operating System

EX4000 switches run Junos OS, Juniper's powerful and robust network operating system that powers all Juniper switches, <u>routers</u>, and <u>firewalls</u>. By utilizing a common operating system, Juniper delivers a consistent implementation and operation of control plane features across all products. To maintain that consistency, Junos OS adheres to a highly disciplined development process that uses a single source code and employs a highly available modular architecture to prevent isolated failures from bringing down an entire system. These attributes are fundamental to the core value of the software, enabling all Junos OS-powered products to be updated simultaneously with the same software release. All features are fully regression tested, making each new release a true superset of the previous version.

You can deploy the software with complete confidence that all existing capabilities are maintained and operate in the same way.

Flex Licensing

<u>Juniper Flex</u> licensing offers a common, simple, and flexible licensing model for EX Series access switches, enabling you to purchase features based on your unique network and business needs.

We offer Flex licensing in Standard, Advanced, and Premium tiers. Standard tier features are available with the Junos OS image that ships with EX Series switches. You can unlock additional features with the purchase of a Flex Advanced or Flex Premium license.

The Flex Advanced and Flex Premium licenses for EX Series platforms are class-based, determined by the number of access ports on the switch. Class 1 (C1) switches have 12 ports, Class 2 (C2) switches have 24 ports, and Class 3 (C3) switches have 32 or 48 ports.

EX4000 switches support both subscription and perpetual Flex licenses. We offer subscription licenses for three- and five-year terms. In addition to Junos OS features, the Flex Advanced and Flex Premium subscription licenses include Juniper Mist Wired Assurance. Flex Advanced and Flex Premium subscription licenses also allow portability across the same tier and class of switches, ensuring investment protection.
