AI-Native Networking

Making every broadband connection count

Broadband connectivity has the power to transform lives as connectivity with the wider world provides opportunities to support public safety and security, education, and commerce.

Broadband connections are a major priority in the public funding landscape. Juniper Networks' AI-Native Networking Platform supports community broadband requirements with the technology needed to deliver experience-first constituent services. Funding is available at the state and federal levels through various competitive opportunities.

Funds are available

Sample distributions

Grant name	Annual funding	Use cases	Juniper Networks solutions
Broadband Equity, Access, and Deployment Program (BEAD)	US $42.2 billion	Deploy broadband service to unserved and underserved locations nationwide	Full stack network infrastructure services
