AI-Native Networking

Making every education connection count

Uninterrupted and secure connectivity is needed in schools for teachers to teach and students to learn. With Juniper AI-Native Networking, network deployment is simpler, helping conserve limited district resources and making performance predictable and reliable to ensure users have access to tools needed for learning. Funding is available at the state and federal levels through various competitive opportunities.

Funds are available

Sample distributions

Grant name	Annual funding	Use cases	Juniper Networks solutions
Strengthening CTE for the 21st Century (Carl D. Perkins V)	US $1.4 billion	Development of academic and technical skills through education programs	Full stack AI-Native network solutions support computer science and cyber education programs
