How Marvis Minis helps state and local governments

Juniper Financial Services offers a range of payment solutions

Why Marvis Minis?

AI-native automated network testing and issue resolution

As governments require employees to return to offices full time or to start hybrid work, they're faced with new challenges to ensuring connectivity and uninterrupted delivery of constituent services. Marvis Minis provide AI-native network insights and automation capabilities, pressure test networks, identify potential issues, and automate problem resolution to keep users connected and constituents' services uninterrupted.

From reactive to proactive network management

Marvis Minis are the industry's only AI-native networking digital experience twins, a cutting-edge network management tool supercharged by AI. They proactively simulate users, devices, and apps to detect issues before they can impact the user experience, validating dynamic network complexities.

Always on, constantly learning

Marvis Minis are constantly learning, anticipating tomorrow's challenges, and proactively validating your network to meet them—no additional setup or ongoing calibration is required.

Fully integrated with the Mist platform

Marvis Minis are fully integrated into Juniper's AI-native network: no extra hardware, software, or clients needed.

Rich data insights

Marvis Minis provides rich network data streams into the Marvis AI engine for verification, troubleshooting, and ongoing learning.

From reactive to proactive network management

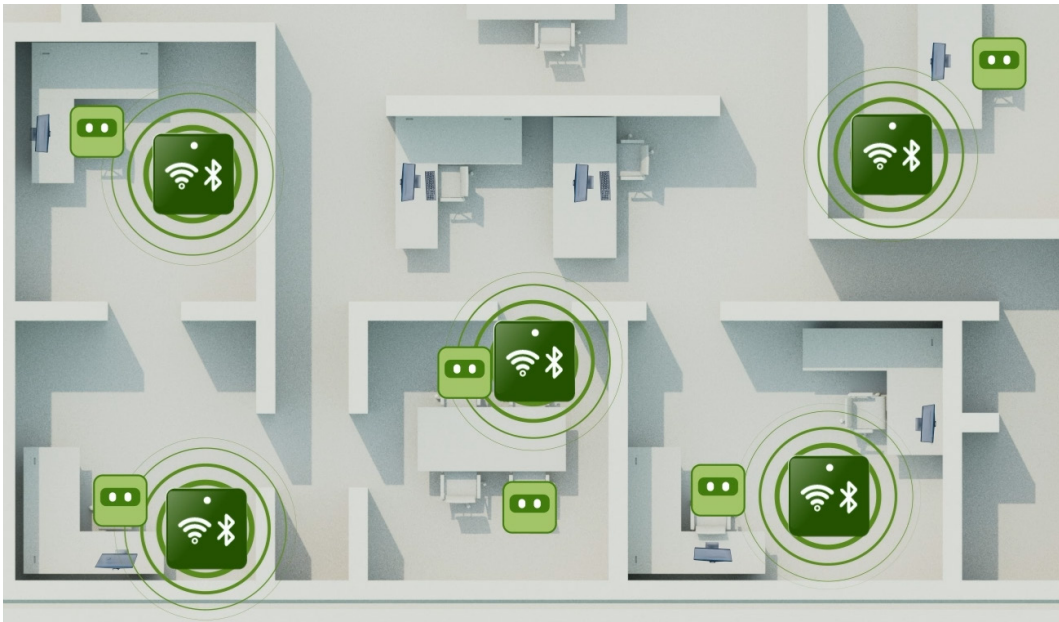

Marvis Minis harness the Marvis AI engine's data to deliver an end-to-end view of dynamic network changes and network health, flag any anomalies, and recommend actions for swift resolution.

Marvis Minis in action

Marvis Minis extend the reach of agency IT resources

Say goodbye to network problems, say hello to the future of government network management with Marvis Minis.

Exceptional user experiences	Learn what's wrong with the network and fix it in real time before users even notice.
Simplified management	Leave behind "black hole" configuration changes and reactive processes. Say hello to proactive automation.
True efficiency in government	Optimize agency resources and avoid chasing issues with self-configuring, auto-learning assistants.
