

Are You Maximizing the Benefits of AIOps?

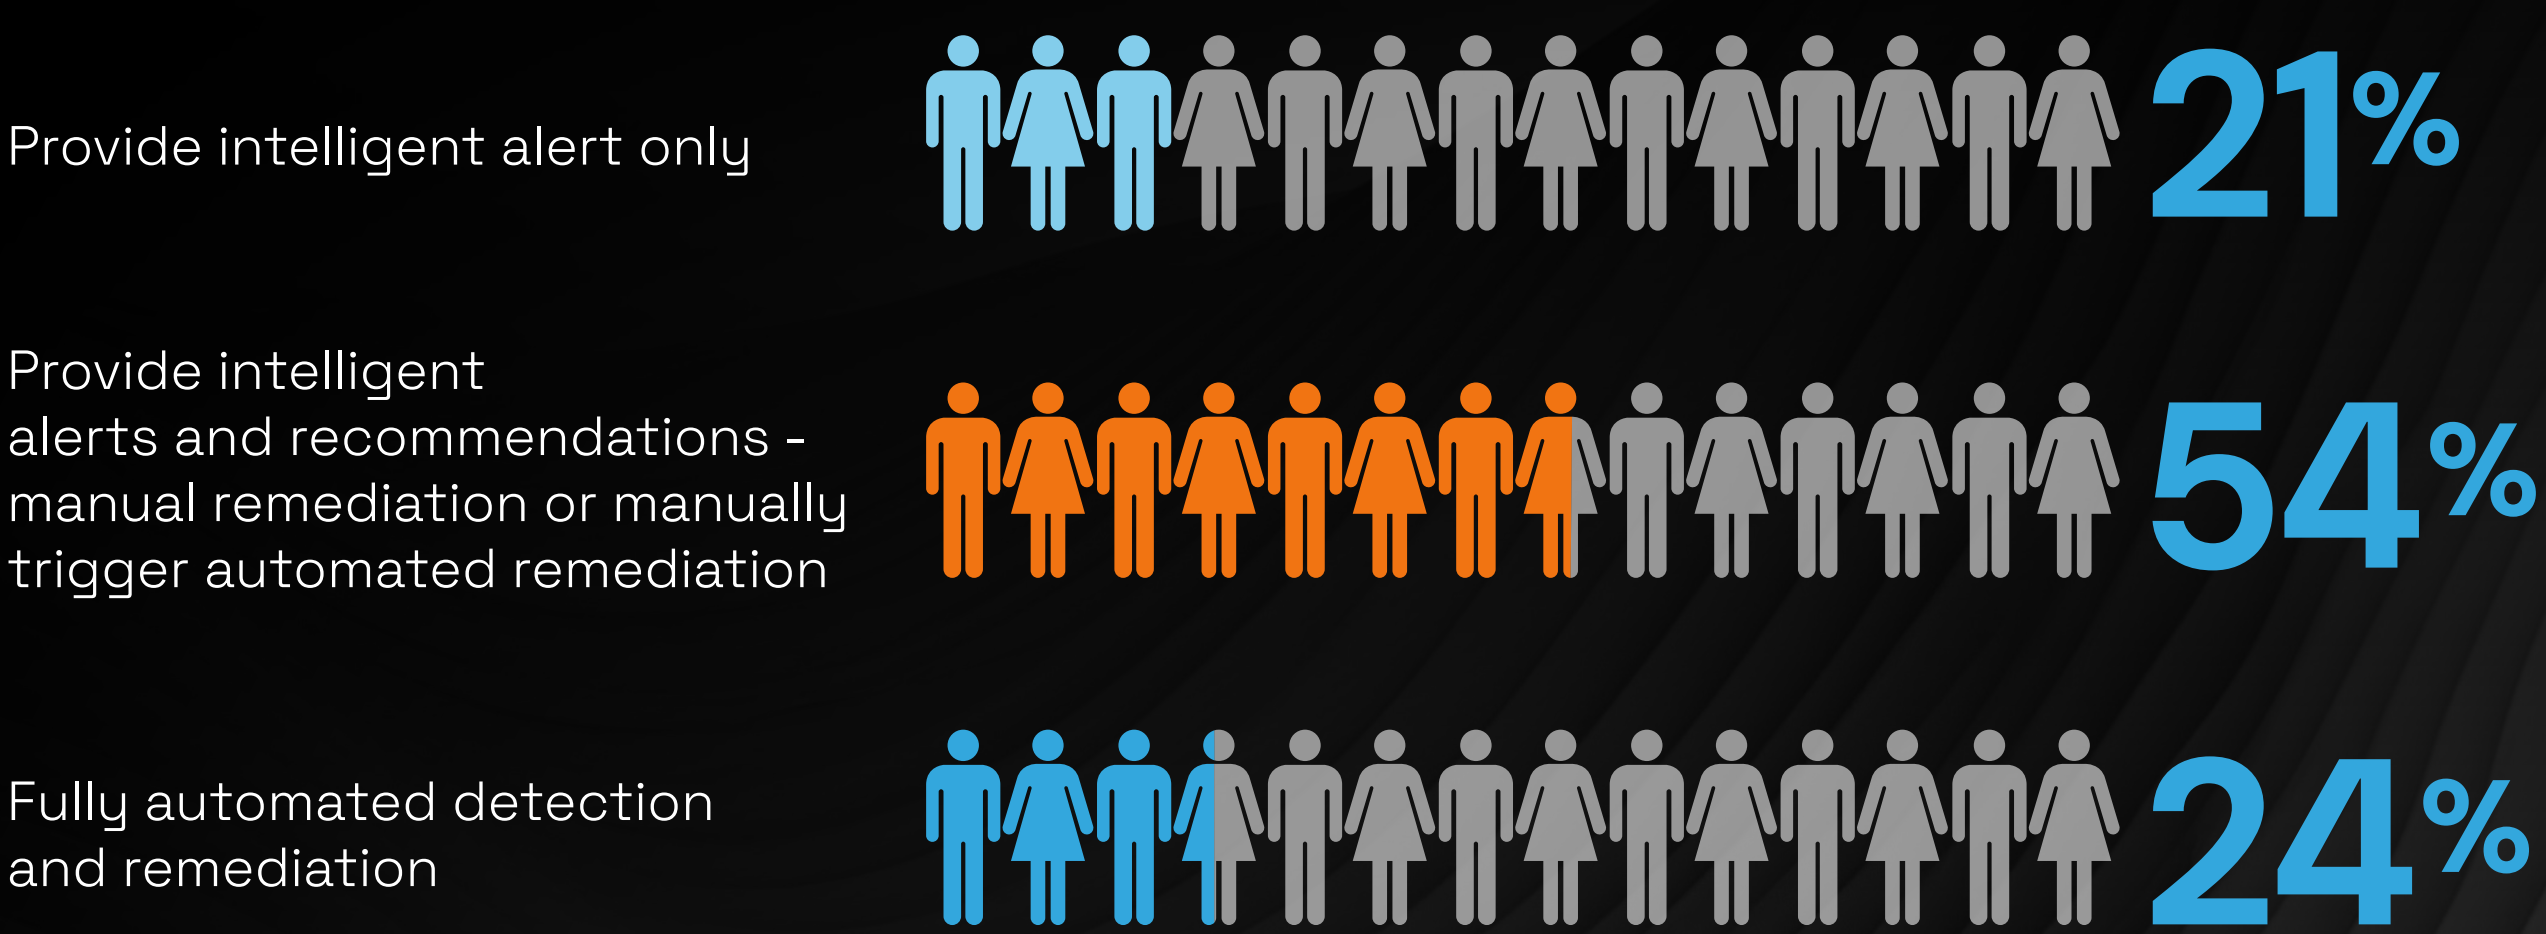

Modern IT environments are highly distributed, resulting in an increasing dependence on the network to achieve business objectives. However, these dynamic and distributed environments are also more complex to manage efficiently. Increasingly, AI-driven operations (AIOps) are delivering tangible benefits to organizations; however, organizations and vendors are at different stages of maturity with AIOps solutions. To accelerate the journey to a self-driving network and optimize the benefits achieved, organizations must assess their own and their vendors' AIOps maturity.

97% WOULD BE LIKELY TO EVALUATE A NEW NETWORK VENDOR IF IT HAD SUPERIOR AIOps CAPABILITIES

AIOps is now considered a valuable technology for any organization, with virtually all organizations (97%) citing that they are open to evaluating new network vendors if they have superior AIOps technology.

ORGANIZATIONS ARE ADOPTING AI TECHNOLOGIES THE MAJORITY OF ORGANIZATIONS ARE TRENDING TOWARDS A SELF-DRIVING NETWORK

TO OPTIMIZE YOUR BENEFITS FROM A SOLUTION, ASK THE FOLLOWING 5 QUESTIONS OF YOUR PROVIDER

- 

1. How long has this AIOps solution been generally available, and can they provide references?
- 

2. Can the vendor provide model accuracy statistics?
- 

3. How many network domains are covered?
- 

4. Does the solution utilize closed-loop feedback and a human-in-the-loop approach for control?
- 

5. Does the solution integrate with 3rd Party Tools and is there a roadmap for Agentic AI?

GETTING STARTED

Highly distributed network environments require AIOps to regain control of their networks and focus on business growth. Deploying mature AIOps solutions now can optimize the benefits your business achieves. For more information on this topic, click on the Learn More button below.
