

ApexaiQ and Juniper Networks: Eliminate Blind Spots, Everywhere

Harness AI-native insights for complete network security

Uncover your blind spots

[Learn how →](#)

The challenge/opportunity

Blind spots increase risk and complexity

Modern networks hide shadow IT and unknown devices, creating major security and compliance risks. Without real-time, unified inventory visibility, IT teams can't see their true attack surface, leaving critical assets exposed.

Juniper and ApexaiQ's joint solution solves this. We combine Mist™, our AI-native networking platform's, AI-native network visibility with ApexaiQ's agentless asset discovery to provide a single, actionable view of your entire IT estate, from the network core to every connected device.

The capabilities you need

AI-native, unified visibility for proactive risk management

Move beyond reactive fixes. Gain proactive, unified control over your entire IT asset landscape.

- **See your entire network and all your assets instantly**

Gain a single, comprehensive view of every device, eliminating blind spots and shadow IT.

- **Proactively find and fix risks before they spread**

Use AI to identify vulnerabilities and get actionable recommendations to fix threats before they escalate.

- **Automate operations and ensure compliance**

Save time and reduce manual errors with automated discovery, reporting, and policy enforcement.

The ApexaiQ and Juniper solution

Complete asset visibility to secure your network

The Juniper and ApexaiQ integration delivers a unified, AI-native solution for complete asset and network visibility. Combining Mist's AI-native network insights with ApexaiQ's agentless discovery gives you a single, trusted inventory of every device connected to your network.

This eliminates dangerous blind spots and shadow IT, providing a clean, contextualized view of your entire attack surface.

With this clarity, your team can proactively identify, prioritize, and remediate vulnerabilities from one dashboard. This ensures your network remains secure, compliant, and optimized, turning reactive problem-solving into proactive risk management.

How it works

From risk to reward: key scenarios

Turn complex IT challenges into opportunities for growth and security with a unified view of your entire network and asset landscape, ensuring you are always audit-ready and secure.

Secure your attack surface

Proactively identify and remediate vulnerabilities on all connected devices to significantly reduce your risk exposure.

Streamline compliance and audits

Generate comprehensive, real-time asset reports to simplify audits and maintain continuous compliance effortlessly.

Accelerate M&A due diligence

Quickly gain a complete inventory of a target company's IT assets for faster, data-driven decisions.

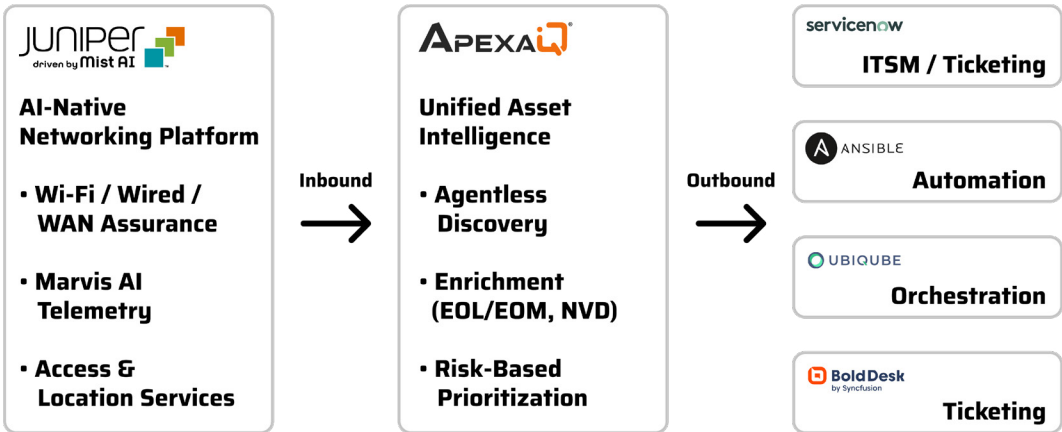

Boost operational efficiency

Automate asset discovery and management to free up IT resources for strategic initiatives.

Core features/capabilities

Agentless, real-time discovery	Eliminate blind spots and shadow IT Instantly find every asset on your network without deploying agents, closing critical security gaps.
AI-native network insights	Proactive anomaly and threat detection Maintain an accurate, up-to-date inventory across systems, ensuring data consistency and breaking down silos.
Unified asset inventory	Get a single source of truth Consolidate data into one clean, trusted, and always current inventory for complete visibility.
Enriched contextual data	Make faster, smarter security decisions Go beyond basic asset data with rich context to understand risk and prioritize remediation efforts.
Integrated risk prioritization	Focus on what matters most, fast Automatically identify and rank vulnerabilities, allowing your team to fix the most critical threats first.
Automated compliance reporting	Simplify audits and ensure governance Generate comprehensive, audit-ready reports with a single click, saving time and ensuring continuous compliance.

Solution capabilities

Juniper delivers the industry's first AI-native networking platform for better operator and end user experiences with the most comprehensive AIOps across the entire network. Mist cloud is integral to our AI-native platform. In this solution, all wireless deployment, operational, and management functions are handled via the Mist cloud, which delivers the following Wi-Fi and virtual Bluetooth LE services:

Wi-Fi Assurance

Wi-Fi Assurance delivers user service levels, anomaly detection, dynamic packet capture, automated event correlation, custom policy configuration, guest WLAN access, and more.

Marvis® AI Assistant

Provides natural language queries with integrated helpdesk for rapid and simple root cause determination and issue resolution while realizing the self-driving network with its Marvis Actions framework.

Mobile user management

Push high accuracy, real-time location-based proximity or wayfinding notifications to engage users and offer turn-by-turn directions or custom contextual proximity notifications.

Asset location

Find high-value resources such as shipping pallets, wheelchairs, security personnel, and more with real-time intelligence from Mist's Wi-Fi and BLE infrastructure.

Juniper access points

Leverage enterprise-grade access points to work in conjunction with Juniper Mist Cloud and Marvis® AI to deliver premium wireless Wi-Fi, BLE, and IoT access capabilities.

Wired Assurance and switching

Enable AI-native automation at the switch access layer to continually optimize user experiences, shorten mean time to repair, and improve connected device visibility.

ApexaiQ's platform delivers a unified, clean, and trusted asset inventory, eliminating the blind spots and shadow IT that create risk. It empowers teams to discover every asset, enrich the data for clarity, and act on vulnerabilities from a single dashboard before they become a reality.

**Agentless
real-time discovery**

Instantly reveals and unifies every asset on the network without deploying agents, removing shadow IT

**Enriched, contextual
asset data**

Eliminates data gaps with enriched, contextual information, providing clarity and replacing fragmented info

**Risk-based
prioritization**

Guards the entire attack surface by enabling you to define risk tolerance and focus on what to fix first

**Rapid risk
mitigation**

Finds, prioritizes, and remediates vulnerabilities directly from a single, unified dashboard

**Automated validation
and compliance**

Keeps your inventory current and compliance airtight with automated validation so you never fall behind

**Actionable,
confident reporting**

Drives continuous risk reduction and delivers clean, auditable results through actionable insights

Why Juniper and ApexaiQ?

Our partnership advantage

ApexaiQ stands apart by delivering a truly unified and clean asset inventory, eliminating shadow IT and blind spots that others miss. Our agentless, real-time discovery and risk-based prioritization empower you to move from reactive to proactive, ensuring your organization is always secure, compliant, and audit-ready with a single source of truth.
